

# MOZU DECEMBER 2014 SERVICE UPDATE RELEASE NOTES

Release Notes

## What's New

### Dev Center: Retrieve Error Log Details

While working within Mozu Admin or Dev Center, you may encounter errors and want to know more information about the issue. Each time you receive an error, the message displays a correlation ID, and you can use this ID to retrieve error information from the Dev Center Error Log:

1. In Mozu Dev Center, select **Help>Error Log Information**.
2. Enter the correlation ID in the text box.
3. Select your error from the list, click the Gear icon, and select **View**.

Here's an example of error details after searching for correlation Id  
333a7ad5ece641ac860f426181deccd3:

#### Details

Correlation Id: 333a7ad5ece641ac860f426181deccd3

Severity: Error

Time Stamp: Dec 04 2014 02:53:12

Application Name: AppDev

Content: An Exception occurred

```
{
  "timeStamp": "2014-12-04T20:53:12.332Z",
  "correlationId": "333a7ad5ece641ac860f426181deccd3",

      "source": "Mozu.Core.Api.Client",
      "message": "Validation Failure: PropertyName: 'SupportedShoppingCountries',
    }
  },
  "properties": {},
  "severity": "Error",
  "content": "An Exception occurred"
}
```

### Orders: Order Processing Update

The Amount text box in the Add Payment dialog reflects the amount due for the first payment and the remaining balance due for any subsequent payments.

This is helpful if you are processing an order in multiple payments; the amount in the Payment dialog updates to reflect the remaining amount due each time you add a payment. The amount in the Payment dialog updates to reflect the remaining amount due, regardless if the transaction has not been captured or authorized.

## Mozu Admin General Settings: Enable Email Alias

When you send email from Mozu, you may want to send it with an email alias. Email aliases forward email from one account to another specified account. For example, instead of posting a specific employee's email or an internal company mailing list on your site, you can define a generic alias, such as [info@yourcompany.com](mailto:info@yourcompany.com), that Mozu forwards to the specific employee in charge of replying. You configure your email alias in Mozu Admin:

1. Select **Settings>General Settings**.
2. In General Settings, select **Notifications**.
3. Add your alias text in the Sender e-mail alias text box.

If you add an email alias, all email templates in Site Builder automatically receive this update.

## Catalog: Fixed Issue

Resolved an issue where products did not save if any minimum advertised price field contained data. You can enter a price for products for the Minimum Advertised Price without encountering issues saving the product. This includes new products entered, or saving edits on an existing product.
